**Introduction to the Accounting Process** C.A.M. Klerks-van de Nouland, H.J.M van Sten-van 't Hoff, 2019-11-07

Introduction to the Accounting Process brings clarity to the process of setting up an accounting system including a basic explanation of how to enter numbers into the system manually. The clear structure of the book provides students with good insight into the basics of accounting. The book consists of four parts: designing an accounting system, special entries, and frequently occurring themes such as VAT clearing of invoices and discounts, international aspects of accounting, and ratio analysis. An integrated case enables students to show their knowledge in practice. The simple structure and concise nature of the book combined with a useful companion website will help students to improve on any deficiencies in the subject.

Each chapter opens with a relatable real life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the why as well as the how aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.
