Edison Frank Lewis Dyer, Thomas Commerford Martin, 1910 **Free Fatty Acid Receptors** Graeme Milligan, Ikuro Kimura, 2017-02-08 This book highlights the important role free fatty acids FFA play as potential drug targets While FFA have long been considered byproducts of cell metabolism they are now recognized as ligands that regulate cell and tissue function via G protein coupled receptors At least three receptors have been identified for which FFA appear to be the endogenous ligands **HSF1 and Molecular Chaperones in Biology and Cancer** Marc Laurence Mendillo, David Pincus, Ruth Scherz-Shouval, 2020-04-15 Protein homeostasis or Proteostasis lies at the heart of human health and disease From the folding of single polypeptide chains into functional proteins to the regulation of intracellular signaling pathways to the secreted signals that coordinate cells in tissues and throughout the body the proteostasis network operates to support cell health and physiological fitness However cancer cells also hijack the proteostasis network and many of these same processes to sustain the growth and spread of tumors The chapters in this book are written by world experts in the many facets of the proteostasis network They describe cutting edge insights into the structure and function of the major chaperone and degradation systems in healthy cells and how these systems are co-opted in cancer cells and the cells of the tumor microenvironment The chapters also cover therapeutic interventions such as the FDA approved proteasome inhibitors Velcade and Kypolis as well as other therapies currently under clinical investigation to disarm the ability of the proteostasis network to support malignancy This compendium is the first of its kind and aims to serve as a reference manual for active investigators and a primer for newcomers to the field This book is dedicated to the memory of Susan Lindquist a pioneer of the proteostasis field and a champion of the power of basic scientific inquiry to unlock the mechanisms of human disease The chapter Reflections and Outlook on Targeting HSP90 HSP70 and HSF1 in Cancer A Personal Perspective is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com *RNA Editing* Ernesto Picardi, Graziano Pesole, 2021-08-13 This volume provides an overview about main RNA editing mechanisms focusing on their functions in physiological as well as pathological conditions Chapters guide readers through state of the art methodologies to investigate RNA editing through wet and dry approaches Written in the highly successful Methods in Molecular Biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and cutting edge RNA Editing Methods and Protocols aims to ensure successful results in the further study of this vital field

Eukaryome Impact on Human Intestine Homeostasis and Mucosal Immunology Nancy Guillen, 2020-06-01 Multiple demographic or economic parameters contribute to the origin of emerging infections for example poverty urbanization climate change conflicts and population migrations All these factors are a challenge to assess the impact present and future of parasitic diseases on public health The intestine is a major target of these infections it is a nutrient rich

environment harbouring a complex and dynamic population of 100 trillion microbes the microbiome Most researches on the microbiome focus on bacteria which share the gut ecosystem with a population of uni and multi cellular eukaryotic organisms that may prey on them Our interest focuses on the families of eukaryotic microbes inhabiting the intestine called intestinal eukaryome that include fungi protists and helminths Knowledge on the reciprocal influence between the microbiome and the eukaryome and on their combined impact on homeostasis and intestinal diseases is scanty and can be considered as an important emerging field Furthermore the factors that differentiate pathogenic eukaryotes from commensals are still unknown This book presents an overview of the science presented and discussed in the First Eukaryome Congress held from October 16th to 18th 2019 at the Pasteur Institute in Paris This book covers the following topics Phylogenetic prevalence and diversity of intestinal eukaryotic microbes and their still enigmatic historical evolution and potential contributions to mucosal immune homeostasis Integrative biology to study the molecular cell biology of parasite host interactions and the multiple parameters underlining the infectious process The exploitation of tissue engineering and microfluidics to establish three dimensional 3D systems that help to understand homeostasis and pathological processes in the human intestine

Suggestion and Suggestibility Vladimir A. Gheorghiu, Petra Netter, Hans J. Eysenck, Robert Rosenthal, 2012-12-06 This book contains the proceedings of the First International Symposium on Suggestion and Suggestibility held at the University of Giessen in the Federal Republic of Germany July 7 11 1987 upon the initiative of and organized by Dr V A Gheorghiu and Dr P Netter I regret that for personal reasons I was unable to accept his kind invitation to attend for Dr Gheorghiu and I are old friends I am pleased however to have this opportunity to call attention to the significance of this volume Most of the chapters were presented in approximately their present form at the symposium though some have been extensively revised for publication It was a wise choice to divide the papers into four major sections I Theoretical and Historical Perspectives II Assessment and Individual Differences of Suggestibility III Psychophysiological Aspects of Suggestibility and IV Social and Cognitive Aspects of Suggestive Processes each with a summarizing commentary In view of the variety and difficulty of the individual papers it is a help to have the integration provided by these commentaries on Part I by Sheehan Chap 7 on Part II by Lundy Chap 13 on Part III by Edmonston Chap 19 and on Part IV by Fiedler Chap 30 *Tec and the Hole: Band 02a/Red A (Collins Big Cat)* Tony Mitton, 2017-11-15 Tec the detective has found a hole in the ground but who dug it Children follow Tec as he trails his suspects until he finds the vital clue that leads him to the guilty party *Parasites and Allergy* Monique Capron, François Trottein, 2006 The inverse correlation between allergic diseases and helminth infections has been debated for over 30 years It was initially assumed that the underlying mechanism is an imbalance between Th1 and Th2 responses that as a result of reduced exposure to Th1 inducing infectious pathogens has tipped to allergic Th2 responses It has only recently been clearly demonstrated that helminth infections have negative effects on allergic disease manifestation This was shown to be consistent with the activity of regulatory cell populations which control the effector mechanisms of both Th1 and

Th2 In the An Epidemic of Absence Moises Velasquez-Manoff, 2012-09-04 Whether it is asthma food or pollen allergies type 1 diabetes lupus multiple sclerosis or Crohn's disease everyone knows someone who suffers from an allergic or autoimmune disorder And if it appears that the prevalence of these maladies has increased recently that's because it has to levels never before seen in human history These days no fewer than one in five and likely more Americans suffer from one of these ailments We seem newly and bafflingly vulnerable to immune system malfunction Why Science writer Moises Velasquez Manoff explains the latest thinking about this problem and explores the remarkable new treatments in the works In the past 150 years improved sanitation water treatment and the advent of vaccines and antibiotics have saved countless lives nearly eradicating diseases that had plagued humanity for millennia But now a growing body of evidence suggests that the very steps we took to combat infections also eliminated organisms that kept our bodies in balance The idea that we have systematically cleaned ourselves to illness challenges deeply entrenched notions about the value of societal hygiene and the harmful nature of microbes Yet scientists investigating the rampant immune dysfunction in the developed world have inevitably arrived at this conclusion To address this global epidemic of absence they must restore the human ecosystem

New Developments in Diagnostic Virology Peter A. Bachmann, 1983 The contributions to this book derived from the Seventh Munich Symposium on Microbiology on June 3 and 4 1981 which was organized by the WHO Centre for Collection and Evaluation of Data on Comparative Virology at the Institute of Medical Microbiology Infectious and Epidemic Diseases University of Munich Federal Republic of Germany One of our principal purposes was to establish a forum at which the comparative aspects of questions of current interest in the field of medical virology could be discussed In addition to the presentation of recent findings in microbiology our overall aim was to crystallize trends and indicate new directions for future research activities This book is a topical review of New Horizons in Diagnostic Virology Every one interested in virology is aware of the tremendous progress made in viral diagnostic techniques during recent years and the growing importance of viral diagnosis in human and veterinary medicine There is yet another step that diagnostic virology has to take the introduction on a routine basis of methods of molecular biology into the viral diagnostic laboratory The application of monoclonal antibodies and techniques for the chemical and biological identification of proteins carbohydrates and enzymes are discussed as is the introduction of techniques for the characterization of nucleic acids in viral diagnosis

Virus-Induced Immunosuppression Steven Specter, Mauro Bendinelli, Herman Friedman, 2012-12-06 It is now widely acknowledged that at the beginning of this century Claude von Pirquet first pointed out that a viral disease i.e. measles resulted in an energy or depression of preexisting immune response namely delayed continuous hypersensitivity to PPD derived from Mycobacterium tuberculosis Thereafter observations that viral infections may result in immunosuppression have been recorded by many clinicians and infectious disease investigators for six or seven decades Nevertheless despite

sporadic reports that infectious diseases caused by viruses may result in either transient or prolonged immunodepression investigation of this phenomenon languished until the mid 1960s when it was pointed out that a number of experimental retroviral infections of mice with tumor viruses may result in marked immunosuppression However it was not until the recognition of the new epidemic of acquired immunodeficiency syndrome AIDS caused by the human immunodeficiency virus and related viruses that acquired immunodeficiencies associated with virus infection became general knowledge among biomedical investigators as well as the lay public A number of reviews published during the past decade or so pointed out that numerous viruses may affect humoral and cellular immune responses Furthermore expanding knowledge about the nature and mechanisms of both humoral and cellular immunity and pathogenesis of viral infections has provided clinical and experimental models for investigating in depth how and why viruses of man and animals profoundly affect immune responses
