Free Fatty Acid Receptors Graeme Milligan, Ikuo Kimura, 2017-02-08 This book highlights the important role free fatty acids (FFA) play as potential drug targets. While FFA have long been considered byproducts of cell metabolism, they are now recognized as ligands that regulate cell and tissue function via G-protein-coupled receptors. At least three receptors have been identified for which FFA appear to be the endogenous ligands.

RNA Editing Ernesto Picardi, Graziano Pesole, 2021-08-13 This volume provides an overview about main RNA editing mechanisms, focusing on their functions in physiological as well as pathological conditions. Chapters guide readers through state-of-the-art methodologies to investigate RNA editing through wet and dry approaches. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, RNA Editing: Methods and Protocols aims to ensure successful results in the further study of this vital field.

HSF1 and Molecular Chaperones in Biology and Cancer Marc Laurence Mendillo, David Pincus, Ruth Scherz-Shouval, 2020-04-15 Protein homeostasis, or "Proteostasis", lies at the heart of human health and disease. From the folding of single polypeptide chains into functional proteins, to the regulation of intracellular signaling pathways, to the secreted signals that coordinate cells in tissues and throughout the body, the proteostasis network operates to support cell health and physiological fitness. However, cancer cells also hijack the proteostasis network and many of these same processes to sustain the growth and spread of tumors. The chapters in this book are written by world experts in the many facets of the proteostasis network. They describe cutting-edge insights into the structure and function of the major chaperone and degradation systems in healthy cells and how these systems are co-opted in cancer cells and the cells of the tumor microenvironment. The chapters also cover therapeutic interventions such as the FDA-approved proteasome inhibitors Velcade and Kypolis as well as other therapies currently under clinical investigation to disarm the ability of the proteostasis network to support malignancy. This compendium is the first of its kind and aims to serve as a reference manual for active investigators and a primer for newcomers to the field. This book is dedicated to the memory of Susan Lindquist, a pioneer of

the proteostasis field and a champion of the power of basic scientific inquiry to unlock the mechanisms of human disease. The chapter “Reflections and Outlook on Targeting HSP90, HSP70 and HSF1 in Cancer: A Personal Perspective” is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

Eukaryome Impact on Human Intestine Homeostasis and Mucosal Immunology Nancy Guillen, 2020-06-01 Multiple demographic or economic parameters contribute to the origin of emerging infections, for example: poverty, urbanization, climate change, conflicts and population migrations. All these factors are a challenge to assess the impact (present and future) of parasitic diseases on public health. The intestine is a major target of these infections; it is a nutrient-rich environment harbouring a complex and dynamic population of 100 trillion microbes: the microbiome. Most researches on the microbiome focus on bacteria, which share the gut ecosystem with a population of uni- and multi cellular eukaryotic organisms that may prey on them. Our interest focuses on the families of eukaryotic microbes inhabiting the intestine, called “intestinal eukaryome”, that include fungi, protists and helminths. Knowledge on the reciprocal influence between the microbiome and the eukaryome, and on their combined impact on homeostasis and intestinal diseases is scanty and can be considered as an important emerging field. Furthermore, the factors that differentiate pathogenic eukaryotes from commensals are still unknown. This book presents an overview of the science presented and discussed in the First Eukaryome Congress held from October 16th to 18th, 2019 at the Pasteur Institute in Paris. This book covers the following topics: Phylogenetic, prevalence, and diversity of intestinal eukaryotic microbes; and their (still enigmatic) historical evolution and potential contributions to mucosal immune homeostasis. Integrative biology to study the molecular cell biology of parasite-host interactions and the multiple parameters underlining the infectious process. The exploitation of tissue engineering and microfluidics to establish three-dimensional (3D) systems that help to understand homeostasis and pathological processes in the human intestine.

Suggestion and Suggestibility Vladimir A. Gheorghiu, Petra Netter, Hans J. Eysenck, Robert Rosenthal, 2012-12-06 This book contains the proceedings of the First International Symposium on Suggestion and Suggestibility, held at the University of Giessen in the Federal Republic of Germany, July 7-11 1987, upon the initiative of and organized by Dr. V. A. Gheorghiu and Dr. P. Netter. I regret that for personal reasons I was unable to accept his kind invitation to attend, for Dr. Gheorghiu and I are old friends. I am pleased, however, to have this opportunity to call attention to the significance of this volume. Most of the chapters were presented in approximately their present form at the symposium, though some have been extensively revised for publication. It was a wise choice to divide the papers into four major sections. - I. Theoretical and Historical Perspectives, II. Assessment and Individual Differences of Suggestibility, III. Psychophysiological Aspects of Suggestibility, and IV. Social and Cognitive Aspects of Suggestive Processes - each with a summarizing commentary. In view of the variety and difficulty of the individual papers, it is a help to have the integration provided by these commentaries - on Part I by

Sheehan (Chap. 7), on Part II by Lundy (Chap. 13), on Part III by Edmonston (Chap. 19), and on Part IV by Fiedler (Chap. 30).

Tec and the Hole: Band 02a/Red A (Collins Big Cat) Tony Mitton,2017-11-15 Tec the detective has found a hole in the ground - but who dug it? Children follow Tec as he trails his suspects, until he finds the vital clue that leads him to the guilty party!

Parasites and Allergy Monique Capron,François Trottein,2006 The inverse correlation between allergic diseases and helminth infections has been debated for over 30 years. It was initially assumed that the underlying mechanism is an imbalance between Th1 and Th2 responses that, as a result of reduced exposure to Th1-inducing infectious pathogens, has tipped to allergic Th2 responses. It has only recently been clearly demonstrated that helminth infections have negative effects on allergic disease manifestation. This was shown to be consistent with the activity of regulatory cell populations, which control the effector mechanisms of both Th1 and Th2. In th.

An Epidemic of Absence Moises Velasquez-Manoff,2013-09-17 A controversial, revisionist approach to autoimmune and allergic disorders considers the perspective that the human immune system has been disabled by twentieth-century hygiene and medical practices.

ERS Handbook of Paediatric Respiratory Medicine Ernst Eber,Fabio Midula,2021 The 19 sections of this second edition of the ERS Handbook of Paediatric Respiratory Medicine cover the whole spectrum of paediatric respiratory medicine, from anatomy and development to disease, rehabilitation and treatment. The editors have brought together leading clinicians to produce a thorough and easy-to-read reference tool. The Handbook is structured to accompany the paediatric HERMES syllabus, making it an essential resource for anyone interested in this field and an ideal educational training guide.

Global Indonesia Jean Gelman Taylor,2013 In the 19th century, colonial rule brought the modern world closer to the Indonesian peoples, introducing mechanized transport, all-weather roads, postal and telegraph communications, and steamship networks that linked Indonesia's islands to each other, to Europe and the Middle East. This book looks at Indonesia's global importance, and traces the entwining of its peoples and economies with the wider world. The book discusses how products unique to Indonesia first slipped into regional trade networks and exposed scattered communities to the dynamic influence of far-off civilizations. It focuses on economic and cultural changes that resulted in the emergence of political units organized as oligarchies or monarchies, and goes on to look in detail at Indonesia's relationship with Holland's East Indies Company. The book analyses the attempts by politicians to negotiate ways of being modern but uniquely Indonesian, and considers the oscillations in Indonesia between movements for theocracy and democracy. It is a useful contribution for students and scholars of World History and Southeast Asian Studies.

Insect Viruses Byrony C Bonning,2006-09-22 Baculoviruses are perhaps unique among viruses in the breadth of their

biotechnological applications: these insect specific viruses are used not only for insect pest management purposes, but also as laboratory research tools for production of recombinant proteins and for protein display, and as potential vectors for human gene therapy. In addition to highlighting recent advances, this volume provides a comprehensive review of the biotechnological applications of these and other insect viruses in both the academic and private sectors.

I Will Survive Gloria Gaynor,2014-03-11 *I Will Survive* is the story of Gloria Gaynor, America's Queen of Disco. It is the story of riches and fame, despair, and finally salvation. Her meteoric rise to stardom in the mid-1970s was nothing short of phenomenal, and hits poured forth that pushed her to the top of the charts, including Honey Bee, I Got You Under My Skin, Never Can Say Goodbye, and the song that has immortalized her, *I Will Survive*, which became a #1 international gold seller. With that song, Gloria heralded the international rise of disco that became synonymous with a way of life in the fast lane - the sweaty bodies at Studio 54, the lines of cocaine, the indescribable feeling that you could always be at the top of your game and never come down. But down she came after her early stardom, and problems followed in the wake, including the death of her mother, whose love had anchored the young singer, as well as constant battles with weight, drugs, and alcohol. While her fans always imagined her to be rich, her personal finances collapsed due to poor management; and while many envied her, she felt completely empty inside. In the early 1980s, sustained by her marriage to music publisher Linwood Simon, Gloria took three years off and reflected upon her life. She visited churches and revisited her mother's old Bible. Discovering the world of gospel, she made a commitment to Christ that sustains her to this day.

Virus-Induced Immunosuppression Steven Specter, Mauro Bendinelli, Herman Friedman,2012-12-06 It is now widely acknowledged that at the beginning of this century Claude von Pirquet first pointed out that a viral disease, i. e. , measles, resulted in an anergy or depression of preexisting immune response, namely, delayed continuous hypersensitivity to PPD derived from *Mycobacterium tuberculosis*. Thereafter observations that viral infections may result in immunosuppression have been recorded by many clinicians and infectious disease investigators for six or seven decades. Nevertheless, despite

sporadic reports that infectious diseases caused by viruses may result in either transient or prolonged immunodepression, investigation of this phenomenon languished until the mid-1960s, when it was pointed out that a number of experimental retroviral infections of mice with tumor viruses may result in marked immunosuppression. However, it was not until the recognition of the new epidemic of acquired immunodeficiency syndrome (AIDS) caused by the human immunodeficiency virus and related viruses that acquired immunodeficiencies associated with virus infection became general knowledge among biomedical investigators as well as the lay public. A number of reviews published during the past decade or so pointed out that numerous viruses may affect humoral and cellular immune responses. Furthermore, expanding knowledge about the nature and mechanisms of both humoral and cellular immunity and pathogenesis of viral infections has provided clinical and experimental models for investigating in depth how and why viruses of man and animals profoundly affect immune responses.

Clinical Applications of Magnetic Resonance Spectroscopy Suresh K. Mukherji, 1998-04-28 *Clinical Applications of MR Spectroscopy* Edited by Suresh K. Mukherji, M.D. Magnetic resonance spectroscopy (MRS) is a powerful diagnostic tool for a variety of brain disorders—from epilepsy and tumors to age-related degeneration and strokes. Unlike magnetic resonance imaging (MRI), which gives us a picture of anatomical and physiological conditions, MRS generates a frequency domain spectrum that provides information about biochemical and metabolic processes occurring within tissues. *Clinical Applications of MR Spectroscopy* presents a short, practical treatment of MRS today. Comprising contributions by leading authorities in the field, the book discusses MRS techniques used for diagnostic purposes and research, terminologies and examples drawn from clinical experience, and ways to correlate MRS results with other modalities to enhance our understanding of disease processes and the outcomes of particular treatments. Topics include: Basic principles of clinical proton magnetic resonance spectroscopy MRS in the evaluation of epilepsy Proton MRS of brain tumors Proton MRS in selected childhood disorders MRS and spectroscopic imaging for cerebrovascular disease MRS of degenerative brain disease in the elderly MRS of the head and neck Potential clinical applications of new techniques in MRS Correlation of functional brain imaging with MRS *Clinical Applications of MR Spectroscopy* provides 150 photographs and figures to illustrate the interpretation of MRS signals, as well as fully referenced chapters for those wishing to expand their knowledge of the underlying science. It is an essential guide to the state of the art for radiologists and neurologists using this technology to improve patient care.

New Developments in Diagnostic Virology Peter A. Bachmann, 1983 The contributions to this book derived from the Seventh Munich Symposium on Microbiology on June 3 and 4, 1981, which was organized by the WHO Centre for Collection and Evaluation of Data on Comparative Virology at the Institute of Medical Microbiology, Infectious and Epidemic Diseases, University of Munich, Federal Republic of Germany. One of our principal purposes was to establish a forum at which the comparative aspects of questions of current interest in the field of medical virology could be discussed. In addition to the

presentation of recent findings in microbiology, our overall aim was to crystallize trends and indicate new directions for future research activities. This book is a topical review of *New Horizons in Diagnostic Virology*. Every one interested in virology is aware of the tremendous progress made in viral diagnostic techniques during recent years and the growing importance of viral diagnosis in human and veterinary medicine. There is yet another step that diagnostic virology has to take: the introduction on a routine basis of methods of molecular biology into the viral diagnostic laboratory. The application of monoclonal antibodies and techniques for the chemical and biological identification of proteins, carbohydrates, and enzymes are discussed, as is the introduction of techniques for the characterization of nucleic acids in viral diagnosis.

The Applied Theatre Reader Tim Prentki, Sheila Preston, 2013-10-31 The Applied Theatre Reader is the first book to bring together new case studies of practice by leading practitioners and academics in the field and beyond, with classic source texts from writers such as Noam Chomsky, bell hooks, Mikhail Bakhtin, Augusto Boal, and Chantal Mouffe. This book divides the field into key themes, inviting critical interrogation of issues in applied theatre whilst also acknowledging the multi-disciplinary nature of its subject. It crosses fields such as: theatre in educational settings prison theatre community performance theatre in conflict resolution and reconciliation interventionist theatre theatre for development. This collection of critical thought and practice is essential to those studying or participating in the performing arts as a means for positive change.
