Cyber Security Noah Zhang, 2019-10-07 Cyber Security Is Here To Stay. Do you often wonder how cyber security applies to your everyday life, what's at risk, and how can you specifically lock down your devices and digital trails to ensure you are not hacked? Do you own a business and are finally becoming aware of how dangerous the cyber threats are to your assets? Would you like to know how to quickly create a cyber security plan for your business without all of the technical jargon? Are you interested in pursuing a career in cyber security? Did you know that the average starting ENTRY salary of a cyber security professional ranges from 65,000 to 80,000 and jumps to multiple figures in a few years depending on how far you want to go? Here is an interesting statistic: you are probably already compromised. Yes, at some point, one of your digital devices or activities has been hacked, and your information has been sold to the underground market. If you knew how bad the threats really are online, you would never go online again, or you would do everything possible to secure your networks and devices, especially at home, and we're not talking about the ads that suddenly pop up and follow you around everywhere because you were looking at sunglasses for sale on Google or Amazon; those are retargeting ads, and they are totally legal and legitimate. We're talking about very evil malware that hides deep in your device, watching everything you do, and type just as one example among many hundreds of threat vectors out there.

Why is This Happening Now? Our society has become saturated with internet-connected devices and trackers everywhere. From home routers to your mobile phones, most people AND businesses are easily hacked if targeted. But it gets even deeper than this: technology has advanced now to where most hacks are automated by emerging AI by software. Global hackers have vast networks and computers set up to conduct non-stop scans, pings, and probes for weaknesses in millions of IP addresses and network domains such as businesses and residential home routers. Check your router log, and you'll see it yourself. Now, most devices have firewalls, but still, that is what's called a persistent threat that is here to stay; it's growing, and we all need to be aware of how to protect ourselves starting today. In this introductory book, we will cover verified steps and tactics on

how to increase the level of Cyber security in an organization and as an individual It sheds light on the potential weak points which are used as infiltration points and gives examples of these breaches We will also talk about cybercrime in a technologically dependent world Think IoT Cyber security has come a long way from the days that hacks could only be perpetrated by a handful of individuals and they were mostly done on the larger firms or government databases Now everyone with a mobile device home system car infotainment or any other computing device is a point of weakness for malware or concerted attacks from hackers real or automated We have adopted anti viruses and several firewalls to help prevent these issues to the point we have become oblivious to the majority of the attacks The assistance of malware blocking tools allows our computing devices to fight thousands of attacks per day Interestingly cybercrime is a very lucrative industry as has been proven by the constant investment by criminals on public information It would be wise to pay at least half as much attention to your security What are you waiting for scroll to the top and click the Buy Now button to get started instantly
